	Identity, instrumentality and voting in 'white' South Africa .....	49
	The racial census approach.....	53
	Self-identity and voting preferences.....	55
	Conclusion .....	59
	References .....	60
5	<i>Race relations</i> .....	63
	Analysis of the survey.....	64
	Factors influencing racial discrimination and racism in South Africa.....	70
	Conclusion .....	72
	References .....	72
6	<i>Addressing HIV/AIDS</i> .....	73
	Results .....	75
	Sense of concern.....	75
	Level of knowledge.....	75
	Perceived risk.....	76
	Reported sexual behaviour and condom use.....	76
	'Helpless, hopeless and meaningless' outlook on life .....	79
	'Helpless, hopeless and meaningless' stance towards HIV/AIDS protection.....	80
	Discussion.....	81
	Chi-Squared Test Results.....	81
	Concern, knowledge and perceived risk are high .....	82
	Sexual behaviour and condom use.....	83
	Significant protection constraints: Lack of hope .....	84
	The way forward.....	85
	References .....	86
7	<i>Spirituality in South Africa: Christian beliefs</i> .....	87
	Introduction.....	87
	Attendance at religious meetings.....	87
	Public opinion and church attendance .....	89
	Views about Christian principles.....	90
	1. Prayer.....	91
	2. Extra-marital sex .....	91
	3. Jesus as the solution.....	91

4. Life after death .....	92
5. Spiritual re-births .....	92
Christian belief .....	92
Conclusion .....	96
References .....	96
8 <i>Perceptions about economic issues</i> .....	97
Perceptions about economic conditions in South Africa .....	97
Effects of government policies on the general economic situation in the country.....	99
Conclusion .....	101
9 <i>National priorities</i> .....	102
Previous surveys on national priorities.....	102
In regard to job creation, the results by province appear in Figure 9.2.....	103
Comparison by population group.....	104
Comparison by income group.....	105
Comparison by area type.....	105
Comparison by highest education qualification .....	107
Comparison by employment status .....	107
Comparison by age category.....	107
Comparison of how government could best reduce crime by province .....	108
Comparison by area type.....	108
Comparison by population group.....	110
Comparison by personal monthly income .....	110
Comparisons by employment status, age and highest educational qualification.....	111
10 <i>Environmental concerns</i> .....	113
Major environmental issues at a national level.....	113
Major environmental issues at a local level.....	116
Socio-economic profile of people identifying environmental issues at a local level.....	118
Access to water .....	118
Clean air – prevention of air pollution .....	119
Access to land .....	120
Protection of indigenous plants/vegetation.....	120

Conclusion .....	122
References .....	123

**Craig Schwabe** is head of the Geographical Information Systems (GIS) Centre in the Human Sciences Research Council.

**Jarè Struwig** is a chief researcher in the Social Analyses, Modelling and Mapping research programme of the Human Sciences Research Council.

## *Preface*

### *HSRC Public Opinion Survey*

Prospects for consolidating democracy in South Africa, and attempts to address the country's ailing economic fortunes, depend largely on three critical factors: the ability of government to make informed decisions and strategic interventions based on the principles of good governance and sound policy; the willingness and determination of the stakeholder community, including civil society organisations and the private sector, to provide the necessary checks and balances required to maintain and nurture a constitutionally-enshrined democratic dispensation; and the ability of the research community to produce research, either self-generated or commissioned, that provides penetrative and textured accounts of the multi-faceted nature of our society.

The compilation that follows is an illustration of the latter and, firmly rooted in the HSRC's determination to conduct 'social science research that makes a difference', as well as in the organisation's desire to comprehensively align applied social research to user needs, is an attempt to generate debate on matters crucial to the public domain, inform and synergise often competing although complementary discourses on development, and make inroads in a policy arena that is sometimes characterised by too much fluidity and a lack of strategic direction. As such, the account that follows – both as a public snap-shot and a more in-depth analysis of trends and opinions – makes a significant contribution to the critical debate around the challenges to, and prospects for, consolidating democracy in South Africa. It also informs the debate on how to enhance the impetus towards sustained economic growth, and the fundamentals that underpin this.

The compilation also has important tangential implications and policy overtones for the southern African region, and the rest of the African sub-continent at large. Indeed, comparative insight and perspective will begin to grow in importance as efforts to implement the New Partnership for Africa's Development (NEPAD) get off the ground, and it is recognised that a pivotal

basis for doing this will be through comprehensive and rigorous national public audits on attitudes and trends on key issues.

Public opinion and attitudes often remain the yardstick against which interventions are made. The collection which follows, in synthesising and analysing the results and findings of some key policy areas that have been investigated, will provide all stakeholders in South Africa with a set of factual information and derivative analytic insights. Such a representation allows for informed choices and decisions to be made, policy dimensions to be investigated further, and research to be commissioned in areas where voids are conspicuous.

UDESH PILLAY
