# FOREWORD

The South African Department of Education has, through the National Business Initiative and Human Sciences Research Council (HSRC) reports on technical colleges and its own institutional landscape study, subjected the technical college sector to a series of major reviews over the past five years. Long considered the ‘Cinderella’ of the education and training system – particularly in relation to its sister sector, schooling – technical college education has often been characterised by critics as performing poorly in terms of labour market placement of graduates since its historical links to apprenticeship went into decline in the 1980s.

The broader restructuring of education and training in South Africa into three bands – General Education and Training (GET), Further Education and Training (FET), and Higher Education and Training (HET) – and the formulation of a suite of policies to address imbalances in the education-work interface in South Africa have focused attention on the role of technical college education in the new dispensation and on the contribution of colleges to meeting the skills development needs of the country. That focus has resulted, in the first instance, in a new institutional landscape that sees a reduction from 151 colleges to 50 through a set of mergers based on physical location (colleges to be merged being in the same geographical vicinity) and resource allocation (state- and state-aided colleges, or public and semi-independent colleges, being merged in the process).

It is against this backdrop that the Joint Education Trust (now JET Education Services) commissioned the HSRC in late 2000 to conduct a study on the responsiveness of technical colleges to the labour market. The project proposal, entitled ‘Investigating “responsiveness”: Employer satisfaction and graduate destination surveys in the South African technical college sector’, made provision for three separate but related studies:

- A tracer study of a cohort of technical college students who had graduated from colleges two years prior to the survey (managed by Michael Cosser).
- An employer satisfaction survey of a sample of employers of college graduates (managed by Botshabelo Maja).
- Institutional profiles of a sample of technical colleges (managed by Azeem Badroodien) including a socio-economic profile of the physical locations and local labour markets of colleges throughout the country (compiled by Gina Weir-Smith).

This volume presents the findings of these three studies.<sup>1</sup> What its contents suggest, through the juxtaposition of the core chapters, is the importance of viewing the issue of responsiveness through a series of distinct, but related, lenses. Thus college responsiveness is gauged through a multiple focus on graduate perceptions, employer perceptions, college perceptions, and local labour environment conditions, with the inevitable overlay of the researchers’ interpretations of their findings within the context of education and training provision in South Africa. This methodology, while not taken to its logical conclusion in this study, provides a useful model for future studies of institutional responsiveness. As Cosser maintains in his chapter on the graduate destination survey, the bringing together of as many sources of information about institutional responsiveness as possible is needed if a holistic picture of the sector that can inform its transformation is to emerge.

---

1 The socio-economic profile, however, is subsumed under the institutional profile chapter, which examines the local labour environments within which selected colleges are located and with which they are presumed to engage.

---

This volume goes beyond a report on the project itself, however, to place the findings within the broader context of technical and vocational education and training elsewhere in Africa and abroad. Thus Simon McGrath (part of the Secretariat of the Working Group for International Cooperation in Skills Development) and Lorna Unwin (Professor of Vocational Education at the Centre for Labour Market Studies, University of Leicester) have each contributed to the volume based on their work in other national contexts. By locating the investigation of technical college responsiveness within the broader framework of international technical and vocational training initiatives, the volume demonstrates, within a rapidly globalising economy, the interrelatedness of education and training systems and the constant need for dialogue amongst them.

A chapter is devoted to an analysis, by Michael Cosser, of the unsolicited letters of graduates addressed to the project manager of the graduate destination survey. Going beyond statistics, the letters personalise the predicaments facing many technical college graduates as they enter the labour market. Finally, Simon McGrath draws together some of the key agreements and disagreements of the separate analyses to show the multi-faceted implications of the study for policy, practice and research.

This volume will, I believe, make a valuable contribution to the restructuring of technical college education in South Africa as the new FET Colleges take their rightful place as the primary developers of high-quality technical and vocational skills at the intermediate level.

Dr Andre Kraak  
Executive Director, Research Programme on Human Resources Development,  
Human Sciences Research Council

# ACKNOWLEDGEMENTS

This monograph represents the collective endeavours of a number of persons both within and outside of the Research Programme on Human Resources Development (HRD) at the Human Sciences Research Council (HSRC). From the Research Programme, I should like to thank:

- Dr Simon McGrath for methodology synthesis; book conceptualisation; chapters on the context of the project and implications of its findings; quality assurance and editing.
- Dr Andre Kraak for project conceptualisation; research and instrument design; quality assurance.
- Dr Azeem Badroodien for interview schedule design, fieldwork and co-ordination of institutional and provincial employer profiles, synthesis of institutional profile reports and institutional profile report writing.
- Botshabelo Maja for design and management of the employer satisfaction survey and the chapter on the employer satisfaction component.
- Jacques du Toit for questionnaire design, piloting, printing and packaging; for sampling; monitoring and managing of call centre consultants; for monitoring and managing of the postal survey; for calculation of response rates; managing of data capturing; database construction and preparation, and data analysis; fieldwork and co-ordination of institutional and provincial employer profiles; and for writing up the methodology for the institutional profile component.
- Mateselane Tshukudu for project administration.
- Mariette Visser for sampling and college database management.
- Dr Tom Magau for instrument design and questionnaire tallying.
- Mmamajoro Shilubane for instrument design and questionnaire tallying.

From outside the HSRC, I should like to thank:

- Anthony Gewer, JET Education Services, for helping to conceptualise the project and design the questionnaire, and for critically reading component reports.
- Prof Lorna Unwin, University of Leicester, for participating in the fellowship programme on technical college education, presenting a keynote address at the HSRC conference on the project, critically reading component reports, and writing a chapter for this book.
- Dr Nick Taylor, Director, Jet Education Services, for assisting with project conceptualisation and critically reading the final manuscript.
- The Joint Education Trust, for its generous co-funding of the project.
- Members of the Further Education and Training Branch of the Department of Education – especially Themba Ndhlovu and Steve Mommen – for assisting with project conceptualisation.
- The Examinations Office of the Department of Education, for providing us with data for the sampling process.
- The Association of Further Education and Training Institutions of South Africa (AFETISA) – especially Molly Venter and Raymond Preiss – for facilitating access to technical colleges.
- Coltech – especially Japie Roos – for data retrieval.
- The technical colleges nationwide that provided us with student records.
- The 3 105 respondents to the graduate tracer survey.

Michael Cosser  
Project Manager
